Response to Amendment

1. Based on applicant's amendment, filed 2/19/2009, see page 6 through 8 of the remarks, also telephone interview and fax inquiry filed on April 8, 2009, with respect to cancellation of claims 1, 4, 7-8, 10 and 11 and amended claims 2, 3, 5, 6 and 9, have been fully considered and are persuasive, upon further consideration the 35 USC 101 rejection and rejection, of 102(e) for claims 2-3, 5-6 and 9, are hereby withdrawn.

The claims 2-3, 5-6 and 9 now renumbered as 1-5 are allowed.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicants Attorney (Mr. Thomas E. Kocovsky, jr, Reg No. 28,383), on April 8, 2009, without traverse.

The amended claims 2-3, 5-6 and 9 as follows:

Cancel claims 1, 4, 7, 8, 10 and 11.

Claim 2. (Currently Amended) ~~System~~ The system according to claim [[1]] 3, wherein the discriminator prevents selecting fibre tract data that jointly represent a fibre tract or fibre tracts of less than a pre-determined length.

Claim 3. (Currently Amended) ~~System according to claim 1,~~ A system for

Art Unit: 2624

detecting fiber tracts of a human or animal, comprising memory means for holding diffusion images of a region of interest of said human or animal, first processing means connected to the memory means for deriving fibre tract data from the diffusion images, and second processing means for processing the fibre tracts derived by the first processing means, wherein the first processing means includes a discriminator to select the fibre tract data to be processed by the second processing means, wherein the discriminator prevents selecting fibre tract data that jointly represent a bundle of fibre tracts of less than a pre-determined number of fibre tracts per surface area or per volume.

Claim 5. (Currently Amended) ~~Method.....~~ The method according to claim [[4]] 6, wherein a [[first]] second pre-determined criterion is selected to represent a minimum-length of the fibre tract or fibre tracts.

Claim 6. (Currently Amended) ~~Method according to claim 4,~~ A method of detecting fibre tracts of a human or animal comprising the steps of:

processing diffusion image data of a region of interest of said human or animal to derive fibre tract data;

processing the fibre tract data;

at least one of storing the fibre tract data in a computer memory and display the fibre tract data on a display;

wherein processing the fibre tract data is restricted to such fibre tract data that jointly represent a fibre tract or fibre tracts that satisfy at least one pre-determined criterion, and

wherein a ~~second~~-first pre-determined criterion is selected to represent a minimum number of fibre tracts per surface area or volume that are part of a bundle of fibre tracts to be processed.

Claim 9. (Currently Amended) A system for detecting fibre tracts in a human or animal, comprising:

a memory which holds diffusion images of a region of interest of the human or animal;

a processor programmed to:

derive fibre tract data from the diffusion images,

select fiber tract data to be processed,

prevent selecting fiber tract data that jointly represent a bundle of fiber tracts of less than a predetermined number of fiber tract per surface area or per volume or represent a fiber tract or fiber tracts of less than a predetermined length; and

a displays which displays an image depicting fiber tracts processed from selected fiber tract data.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to a system for detecting fibre tracts of a human or animal, comprising memory means for holding diffusion images of a region of interest of said human or animal, first processing means connected to the memory means for deriving fibre tract data from the diffusion images, and second processing means for processing the fibre tracts derived by the first processing means.

Based on applicant's amendment, with respect to claim 3 representative of claims 6 and 9 the closest prior art of record (Thomas E. Conturo), reference is directed to developed noninvasive neuronal fiber tracking for use in living humans, utilizing the unique ability of MRI to characterize water diffusion, , but does not teach or suggest, among other things, "first processing means connected to the memory means for deriving fibre tract data from the diffusion images, and second processing means for processing the fibre tracts derived by the first processing means, wherein the first processing means includes a discriminator to select the fibre tract data to be processed by the second processing means, wherein the discriminator prevents selecting fibre tract data that jointly represent a bundle of fibre tracts of less than a pre-determined number of fibre tracts per surface area or per volume".

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Thomas E. Conturo) prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
